Profile

I started learning software development while studying physics after becoming interested in entrepreneurship and product development. At an early-stage startup, I have turned ideas and requirements into functional web and app MVPs with React/Next.js and React Native.

- Contributed to Career Wellness from its initial planning, implementing many core features and helping launch a service with real payments. The service remains live.
- Designed user journeys and features, contributing to early product development across web and app implementation, shared modules, and deployment architecture.
- Led development of a career AI product selected as one of the final three companies in 2023 Naver AI RUSH. The selection led to a presentation opportunity at DAN23, helping raise the company's profile and contributing to Naver marketing opportunities and follow-up collaboration.

Experience

Republic of Korea Navy | Software Developer

Mar 2025 - Present (Nov 2026 discharge)

- Develop and maintain an Electron-based administrative system for Navy units.
- Design and implement algorithms for the system's workflows and integrate an OMR reader.
- Develop and maintain multiple systems built with React and Spring Boot.

GaziLab Inc. | Product Engineer

Jan 2023 - Feb 2025

Owned early product planning and development, building web and app services as well as AI features.

Career Wellness | Career assessment, reflection, and coaching service

- Built the React/Next.js web service first, then developed its React Native/Expo app, implementing many of its core features directly.
- Developed public web features including work-satisfaction and career-change assessments, one-to-one career sessions, and community access. Also implemented key user journeys and app features across assessment, reflection, and coaching.
- Integrated a payment pipeline and launched a service that processes real payments. The service remains live.
- Structured a monorepo for web, app, and AI services to support a mobile-first product. Reduced duplicated client code with WebView and shared modules, and configured GitHub Actions to deploy only the apps affected by code changes.
- Modularized assessment flows for 7-point scales, single- and multiple-choice questions, and open-ended responses; implemented state management, results analysis, and sharing.
- Built key service features including an AI achievement-card generation pipeline for reflection, authentication, and push notifications.

Career AI | Built on HyperCLOVA X

- Personally proposed joining AI RUSH to the CEO and drove the project forward. Independently owned the career AI product from planning through development and completion.
- Combined rules-based chat UX, prompt engineering, and RAG with HyperCLOVA X, implementing the LangChain server and web integration for personalized responses.
- Selected as one of the final three companies in 2023 Naver AI RUSH; the product was presented by the CEO at DAN23. The presentation increased product visibility and contributed to Naver marketing opportunities and follow-up collaboration with Naver Healthcare Lab. Kukmin Ilbo · Unicorn Factory · Segye Ilbo

Health Screening Analysis AI | Naver Healthcare Lab + Samsung Life

- Developed a HyperCLOVA X-powered health screening analysis AI with Naver Healthcare Lab. Unified results from different hospitals into a common data schema and structured OCR-extracted results. Related article
- Used a vector database and RAG to retrieve relevant screening results and explain them in response to user questions.
- Built a React web tool that analyzed and summarized health screening results so Samsung Life financial consultants could explain them to customers. Related article

Your-Journey | Wellness community and matching app

- Planned and built a community-style social app for people who wanted to connect with others maintaining similar wellness habits. The app matched users and supported community activity.
- Implemented matching and authentication logic, meal, habit, and exercise tracking and sharing, chat UX, and push notifications in a React Native app, then launched it.
- Built the web experience as an acquisition path into the app, including the sign-up flow. Completed the app's core features and launched both web and app. Related article

Product Analytics and Reliability

- Designed user behavior events and conducted funnel analysis with Mixpanel. Supported hypotheses and experiments for landing-page and advertising A/B tests run with the marketing team.
- Monitored production errors with Sentry and established workflows for collecting user feedback through CX channels and Channel Talk and handling incidents.

PAM+NET | POSTECH UGRP

Mar 2022 - Dec 2022

- Developed UX and a Flutter mobile app for an NFT-based credential-verification service and integrated MetaMask.

Personal Projects

Seolleil | Ski trip planning service in Korea

- Planned and built a service to help users find ski resorts that fit their needs and compare trip options. Researched rental shops and lift passes at each resort and brought equipment, transportation, and accommodations into one planning flow.

PawProof | Pet-friendly travel pre-check service

- Built a service using the Korea Tourism Organization's Pet-Friendly Travel Open API to check whether places along a route are suitable to visit with dogs.
- Built pet travel content features and a CMS for creating and managing content.

Technical Skills

- **Web:** React, Next.js, TypeScript, Recoil, Zustand, TanStack Query, shadcn/ui, MUI, Ant Design, Tailwind CSS
- **Mobile:** React Native, Expo, Flutter (Dart), Electron
- **Server and Data:** Node.js, Spring Boot, FastAPI, PostgreSQL, Oracle SQL, Firebase, Pinecone
- **AI Product Development:** LangChain, RAG, HyperCLOVA X
- **Development and Deployment:** Git, Docker, GitHub Actions, Oracle Cloud, NCP, Cloudflare, Vercel

Education and Activities

POSTECH | Physics

Mar 2021 - Present · TGPA 3.47/4.3 · Class percentile 91.7/100

- Founding member of Partners, POSTECH's entrepreneurship club (cohort 1).
- Participated in KAIST startup hackathon SUM and FIST Summer School.
- STEAM mentor at Ikkelda Education Research Institute: led academic exploration, career guidance, and entrepreneurship sessions at Chungju High School, Onyang Girls' High School, Jeonil High School, and Daegu Dongbu High School.

Awards and Certifications

Awards

- 2026 Grand Prize, Republic of Korea Navy and Marine Corps AI Competition.
- 2025 Excellence Award, Republic of Korea Navy Startup Competition.
- 2022 Grand Prize, POSTECH UGRP.

Certifications

- Information Processing Craftsman (Sep 2022).
- Internet Ethics Instructor (IEQ) (Aug 2025).
